Assignment -1 in LATEX

Mathew M Philip EE22BTECH11211

Problem 10.13.3.21:

Two dice are thrown together. Find the probability that the product of the numbers on the top of the dice is

- 1) 6
- 2) 12
- 3) 7

Solution:

X = Outcome of the first dice

Y = Outcome of the second dice

Z = XY

$$\Pr(X) = \begin{cases} 0 & x < 1\\ \frac{1}{6} & 1 \le x \le 6\\ 0 & x > 6 \end{cases} \tag{1}$$

The pmf of Y is also same as above.

$$E(X) = \sum_{X_i=1}^{X_6} X_i \Pr(X_i) = \frac{1}{6} \times \left(\sum_{X=1}^{6} X\right)$$
 (2)

$$= \frac{1}{6} \times \frac{6 \times 7}{2} = \frac{7}{2} \tag{3}$$

Similarly

$$E(Y) = \frac{7}{2} \tag{4}$$

Since X,Y are independent random variables

$$E(XY) = E(X) \times E(Y) \tag{5}$$

$$=\frac{7}{2}\times\frac{7}{2}\tag{6}$$

$$=\frac{49}{4} \tag{7}$$

$$F_Z(n) = \sum_{k=1}^6 \Pr(X = k) F_Y\left(\left(\frac{n}{k}\right)|k\right)$$
 (9)

$$= \sum_{k=1}^{6} \frac{1}{6} \times F_Y\left(\left(\frac{n}{k}\right)|k\right) \tag{10}$$

$$= \frac{1}{6} \times \sum_{k=1}^{6} F_Y\left(\left(\frac{n}{k}\right)|k\right) \tag{11}$$

where Pr(X) denotes pmf of random variable X $F_Y(y)$ denotes cdf of random variable Y

$$F\left(\frac{n}{k}\right) = \begin{cases} 1 & k < \frac{n}{6} \\ \frac{\left[\frac{n}{k}\right]}{6} & k \ge \frac{n}{6} \cap \frac{n}{k} \notin I \\ \frac{\left(\frac{n}{k}\right)}{6} & k \ge \frac{n}{6} \cap \frac{n}{k} \in I \end{cases}$$
(12)

where [x] denotes the greatest integer less than or equal to x

$$F_Z(n) = \frac{1}{6} \times \sum_{k=1}^{6} F_Y\left(\frac{n}{k}\right) \tag{13}$$

$$= \frac{1}{6} \times \left\{ \sum_{k=1}^{\left[\frac{n}{6}\right]} F_Y\left(\frac{n}{k}\right) + \sum_{k=\left[\frac{n}{2}\right]+1}^{6} F_Y\left(\frac{n}{k}\right) \right\} \quad (14)$$

$$= \frac{1}{6} \times \left\{ \sum_{k=1}^{\left[\frac{n}{6}\right]} 1 + \sum_{k=\left[\frac{n}{6}\right]+1}^{6} F_Y\left(\frac{n}{k}\right) \right\}$$
 (15)

$$= \frac{1}{6} \times \left\{ \left[\frac{n}{6} \right] + \sum_{k = \left[\frac{n}{6} \right] + 1}^{6} F_Y \left(\frac{n}{k} \right) \right\} \tag{16}$$

(17)

See Fig. 3

$$Pr(Z = n) = F_{z}(n) - F_{z}(n-1)$$
 (18)

See Fig. 3

$$F_{Y}(y) = \begin{cases} 0 & y < 1\\ \frac{y}{6} & 1 \le y \le 6\\ 1 & y > 6 \end{cases}$$
 (8)

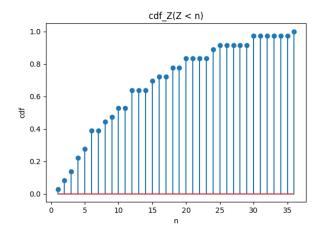

Fig. 3: Plot of cumulative Distribution function

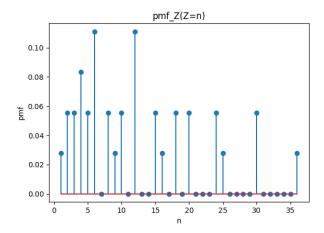

Fig. 3: Plot of Probability Mass Function

Since random variables X,Y are independent

$$Pr(X, Y) = Pr(X) \times Pr(Y) = \frac{1}{6} \times \frac{1}{6} = \frac{1}{36}$$
 (19)

1) Product = 6

X	1	2	3	6
Y	6	3	2	1
Pr(Z=6)	<u>1</u> 36	<u>1</u> 36	<u>1</u> 36	<u>1</u> 36

TABLE 1: Cases for which product of outcome = 6

No. of events for product to be 6 = 4

$$Pr(Z = 6) = F_z(6) - F_z(5)$$
 (20)
= $4 \times \frac{1}{36} = \frac{1}{9}$ (21)

2) Product = 12

X	2	3	4	6
Y	6	4	3	2
Pr(Z=12)	<u>1</u> 36	<u>1</u> 36	<u>1</u> 36	<u>1</u> 36

TABLE 2: Cases for which product of outcome = 12

No. of events for product to be 12 = 4

$$Pr(Z = 12) = F_z(12) - F_z(11)$$
 (22)

$$=4 \times \frac{1}{36} = \frac{1}{9} \tag{23}$$

3) Product = 7

$$Z = 7 \text{ for } (X, Y) = \{\}$$

There are no events for which product of outcome = 7

$$Pr(Z = 7) = 0$$
 (24)
